

SAINT JOHN'S NFLD.

OCTOBER 4 1898.

S.S.STRATHLEVEN.

This is to certify that the undersigned, James Angel,
Engineer, (in the absence of Mr Wheatley, Loyds Surveyor)
and A.D. Brown, Engineer, and surveyor to the Bureau Veritas,
did examine the main journals, and crank shaft journals, of
maine engines, and found same in good order.

We also found upon removing bolts from coupling
between intermediate and low pressure cylinders, that
coupling parted on one side one thirty second of an inch,
and on turning after crank with tunnel shaft connected,
that the opening continued same all round.

Signed.

James Angel
