

S.S. "STETTIN"

Nwc.71400

It is submitted the Newcastle Surveyors' attention should be directed to Sec.3 par.5 of the Rules for Engines & Boilers, which states:- "In the case of boilers of a greater working pressure than 60lbs. per square inch the safety valves may be loaded to 5lbs. above the working pressure." It should be pointed out to them that this regulation does not apply in the case of Boilers having a lower working pressure than 60lbs. per square inch.
