

Composite Ship "Ferreira", 963 tons,  
built in 1869. 11 ms. Cont. 13 A 1 from 12.00.

---

In view of the age of this vessel it is submitted the Surveyor at Lisbon, where it is understood the vessel is now under special survey, should have his attention drawn to the rule requirements in Section 43, paragraphs <sup>3, 4</sup> 5 and 6, page 102 of the rules for Composite Ships. He should be careful in seeing that the whole of these requirements are fully complied with, and that any parts of the vessel that might be found defective, be placed in good condition before he recommends that the class of the vessel be allowed to remain in the Register Book with a record of special survey. The caulking of the bottom and deck should be carefully tested, the rigging, masts, spars, sails and general equipment should all receive close examination and the results of the survey should be set forth on a Repair Report Form for the consideration of the Committee in the usual manner.
