Enclosures.

Your Ref. 24/Kf-K.N°7174/256.

23rd December, 1935.

Dear Sirs,

s.s. "CONTE ROSSO".  
Loeffler Boiler & Escher Wyss Turbine Installation.  
-----

E.

I am favoured with your letter of the 18th instant, with enclosures advised therein, respecting the above matter, and with regard thereto I have the pleasure to inform you that the amended plan of intermediate superheater and plan showing details of branches (Nos.2529/H and 2545/H) will be approved for a working pressure of 14 Kgs. per square cm. on the shell and 140 Kgs. per square cm. in the tubes, provided the superheater be constructed under the usual conditions of survey and testing and the welding be carried out to the entire satisfaction of the Society's Surveyors. It is noted that the branches will be made of cast steel.

One set of the plans in question is returned herewith, one being forwarded to the Society's Surveyors at Vienna for their guidance in dealing with the case, and the remaining set retained in this Office for reference.

I am, Dear Sirs,

Yours faithfully,

copies Vna. and Tri.
