N°UT/14528/4

Messrs. Lloyd's Register of Shipping  
TRIESTE

"CONTE ROSSO".

Torsional shaft for measuring power of Escher Wyss turbine.

We enclose herewith translation of a letter received from Messrs. Escher Wyss having reference to the shaft in question (please see plans N°264570 and 264559).

As already mentioned to your Mr. Stupari, Ing. Flatt of Messrs. Escher Wyss will discuss this matter in a few days time with your London Office.

In any case we beg to point out that we are not aware of your Society having raised any objection to the diameter of this shaft, after it has been made clear that same will be used only for the period of the trials, after which (i.e. on delivery of the vessel to normal trade) it will be substituted by the 75 m/m diameter shaft.

We think that the question is now clear and we shall be glad if you will kindly give the necessary instructions on the matter to your Winterthur Surveyor.

Yours &c.

Cantieri Riuniti dell'Adriatico  
Fabbrica Macchine S. Andrea  
(Sgd) Croveti (Sgd) Cibeles.

Enclosure: copy of letter from Escher Wyss dated 5.12.35 N°21/49840
