LLOYD'S REGISTER OF SHIPPING

UNITED WITH THE BRITISH CORPORATION REGISTER

71, Fenchurch Street, E.C.3

26th May, 1954

1.(H)

Dear Sir,

I have to confirm the recent telegrams between us, as below, respecting the Steamer "DONA LOURDES".

The only parts of the Special Survey so far carried out on this vessel are the examination and testing of the double bottom tanks and settling tanks and the examination of the following machinery items:-

Port and starboard main circulating pumps,  
Port main feed pump<sup>y</sup> ballast pump,  
Main sea inlet valves  
Port main engine No.2 main bearing,  
Starboard main engine HP crank pin  
and No.6 main bearing.

The class of the vessel's machinery is subject to 1). Auxiliary boiler not being used until examined.  
2). Crankshaft of aft outboard dynamo engine being renewed at the first opportunity.  
3). Non-return valves being fitted on the steaming out connections to and from oil fuel heaters at the first opportunity.  
She has an "Endorsement" of class in respect of shell plate No.12 in first strake below sheer (starboard side) etc. set in.

I am instructing the Society's Kobe Surveyors for the case to receive the necessary attention on the vessel's arrival in Japan.

Cont'd....
