

Single Screw Tug "Abille" No 19  
Built by the Gole S.B. & C.

---

The stiffeners on bulkheads Nos 5, 12 and 42 are equivalent to the Rule requirements. The stiffening on bulkhead 32 is slightly deficient, but in view of the support afforded by the longitudinal coal bunker bulkheads (mentioned in the Hull Surveyor's letter of 21.1.25) it is considered the stiffening, as fitted in the vessel could be accepted in this instance.
