M/V "SALLY MAERSK"
(Copenhagen 1st Entry Rept. No. 11761)

~~It is submitted~~ The plans of General Pumping Arrangement & of Pumping Arrangement in the Machinery Space have been examined and are in order.

It is, however, concluded that spacing or lining will be fitted at the fore peak bulkhead when oil fuel is carried in the fore peak tank & that an oil gutterway is fitted in No. 5 hold at the aft peak bulkhead, but these conclusions should be confirmed by the Surveyors. It is also concluded that the vegetable oil in the upper after peak tank is pumped out by a shore pump system or Sumpers.
