SUNDERLAND.

Dear Sirs,

Anglo Saxon Petroleum Co.Ltd.

With reference to our conversation with Mr.S.D. Brand we have supplied 30 K.W. generating sets for numerous vessels owned by the Anglo Saxon Petroleum Co. These generating sets are interchangeable with one another and the dynamos are also interchangeable with those which we supplied coupled to Ruston & Hornsby's engines, all at 675 r.p.m. As the Anglo Saxon Petroleum Co. carry a stock of spare parts this scheme of interchangeability is very important.

In the case of Joseph L.Thompson's Nos. 643 and 645 ships and Smiths Dock's 1158 and 1159 ships two 25 K.W. sets only were required per ship but for interchangeability the 30 K.W. size was supplied derated to 25 K.W. and so far as cable sizes, fuses, classification etc. are concerned these sets are 25 K.W.

Furthermore we frequently supply generating sets derated in output as we standardise our frame sizes and stamp the outputs according to requirements. This is common practice in the manufacture of electrical machinery.

We shall be pleased to give you any further information you require.

Yours faithfully,

per pro THE SUNDERLAND FORGE & ENGINEERING CO.LTD.

L.
Mr.G.
