

BOARD REPORT on the

S. S. "CONTE GRANDE"

It is submitted the Trieste Surveyors be requested to forward a statement of the tonnage contained in the tween-deck space between "E" and "F" Decks

They should state if sparring is fitted in the hold of this vessel, and also the nature & thickness of the deck covering on "D" deck on each side of the vessel in way of the freeboard marking.

The figure reported for the sheer at the stem - viz 96½ inches - would appear to be too small, & the Surveyors should verify this.

A plan should be forwarded giving particulars showing the position of all scuppers & overboard discharges.
