

Op "Elwino Koppen"

It is submitted that the attached calculations should be forwarded to the Station Surveyor, from whom it will be that with a propeller 15.5 dia. at 1700 R.P.M.: a shaft shape 11.8" dia is required, without a continuous line. With the cyl. sizes, the boiler pressure, and the shaft sizes as given in the report. The largest diameter of propeller as allowed by the Rules is 12 feet. We should at once take steps to have the diameter of the propeller reduced accordingly.
