

DRUPA (Tanker Built 8.39)

The drillings forwarded with Singapore Report No. 13679 have been examined for diminution of upper deck and shell plating. The next due date for drilling is 8.65, but the present drilling was carried out at the request of the Owners.

IT IS SUBMITTED the Shell Petroleum Co. be informed that an examination of the upper deck and shell plating as shown on Singapore Harbour Board's Drawing No. R.1432 indicates that renewals will be necessary at the Special Survey due in 8.61, and that these have been indicated in red on the above drawing for their guidance, it being assumed that the drillings are representative of the general condition of the ship. The indicated renewals, however, are subject to any amendments that the Society's Surveyors may consider necessary at the time of the survey.

The Owners should further be informed that the deterioration is such that the Special Survey will require to be carried out at the due date.

Copy of letter to Singapore Surveyors who should be requested to send an additional copy of the plan for eventual transmission to the Surveyors when the Special Survey is carried out.
