

S.S. "MAURITZ".

--

IT IS SUBMITTED the Gothenburg Surveyors be informed it is noted that the Society's Surveyor at Helsingborg has surveyed the main boilers of the vessel and made a special examination of the circumferential seams with entirely satisfactory result, no signs of leakage or strain being observed.

Further, since in other respects the scantlings of the boilers as shown on the plan are considered satisfactory for the desired working pressure of 180 lbs. per square inch, the boilers could be accepted for this working pressure, provided that, on completion of the examination, the boilers be found to be in good condition and the scantlings in accordance with the plan.
