

"TARIA" (Tanker built 10/1939)

Riveted - Combination framing

This tanker was drilled in 12/1956 and is not due to be drilled again until 12/1964. However, at the request of the Owners, drillings as indicated on plan No.R/1460 were verified by the surveyors in connection with Singapore Report No. 13784.

IT IS SUBMITTED the Owners be informed that an examination of the upper deck and shell plating over the cargo tank length, as shown on Singapore Harbour Board's drawing No.R/1460, indicates that renewals will be necessary at the Special Survey in 11/60 and that these have been indicated in red on the above drawing for their guidance, it being assumed that the drillings are representative of the general condition of the plating. Recommendations for renewal of plating outside the cargo tank length, and any amendments to the renewals indicated at present, that may be necessary will be made by the Society's Surveyors at the time of the survey.

Copy of letter to Singapore Surveyors with plan.
