"EMPIRE CONFIDENCE".

=====

The Report 4C shews that there are 3 main dynamo engines, each of 150KW capacity. None of these, according to the report have a compressor attached, but the Report 4b states that there are 2 auxiliary compressors and a small auxiliary compressor each driven by a Diesel engine.

Will Mr. Turpie state how many dynamo engines and how many other oil engines which drive compressors there are in the vessel, *what* air receivers there are in connection with all the auxiliary engines, *what* services are performed by the 2 Cy. Deutz engine approved on May 3rd and how many of these engines there are in the ship.
