

"STANBELL"

Refer MARSEILLES Surveyors' letter of 22.7.55 enclosing shell, deck and bulkhead plating, etc. thicknesses from gauging.

The drillings of the shell and deck plating are submitted for approval, it being concluded that the shell plating in 'J' strake (p & s) in way of No.1 tank (frame 80A) is generally not less than 70% of Rule thickness.

With reference to the Repairers' Drilling Sheet forwarded, it is concluded that the thicknesses recorded therein were checked by the Surveyors and that they are satisfied with the Repairers' proposals.

It should be added that when shell and deck plates here and there are found reduced in thickness to 70% or less of Rule requirements, they should be dealt with.
