

COPY.

25th January, 1928.

Dear Dickie,

I have been checking over the freeboard reports for the "SAN CASTO" and previous sister vessels, and find a statement that the estimated underdeck tonnage on the basis of ordinary floors and framing is 1820 tons. There must be some error in this figure as it appears to me, judging from the Official Underdeck tonnage that this should be about 1620 tons. I shall therefore be glad if you will, kindly confer with the Builders in order that the figures may be adjusted.

With kind regards,

Yours faithfully,

J. Dickie, Esq.,
SUNDERLAND.
