

(Disclass. Bay 48 Top)

15^a

STEEL TURBINE TWIN SCREW STEAMER "SCOTIA", 3441 tons gross.

This vessel has recently been completed at Glasgow, and First Entry Reports have been forwarded from that Port.

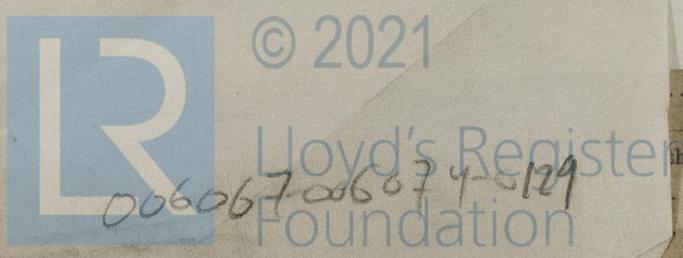

The ship was launched on the 16th November 1920, and, in accordance with Para.7 Page 10 of the General Regulations, the Date of Build for ships not exceeding 10,000 tons gross should be not later than six months after the date of launching.

The last date of survey in the present instance was the 16th December 1921, on which date the vessel was examined in dry dock, found satisfactory, and recoated.

The Surveyor states that the completion of the ship has been delayed on account of the Joiners' Strike, and in the circumstances the Glasgow Committee recommend for the consideration of the General Committee that the Date of Build might be recorded in the Register Book as December 1921.

This recommendation is concurred in.
