

WARD REPORT on the

M. V. "Kosmos I"

This submitted the New York office he informed that it is observed the moulded depth is reported to be 18'-4". As the depth given on their First Entry report is 18.01 ft. they should state which figure is correct. They should report the sheers at  $\frac{1}{4}$ th of the vessel's length from each end, and should state the draught which they have approved as a condition of the class of the vessel. It is observed that the length of the poop is measured over the stern, but they should report the length from the after side of the sternpost.
