

C O P Y.

Bilbao 13th August, 1923.

Dear Sirs,

I beg to inform you that the new steamer "ALFONSO XIII" left
on Saturday for your port where she will be dry docked.

The machinery has been recommended to be classed L.M.C.
subject to the port main injection studs being renewed and after
bow off cock starboard side being examined.

It was found on full power trials that the starboard bottom
water gauge cock forward starboard boiler and the starboard one of
after centre boiler were defective and arrangements were made to
renew these at Gibraltar or Cadiz. It was also found on trial that
the Petrol Engine driving the emergency dynamo was not satisfactory
and the builders stated that it would be overhauled and trialed before
the vessel was handed over.

I shall be glad if you will give these matters your attention.

I am, Dear Sirs,

Yours faithfully.

(Signed) THOMAS MILLER.
