

# "City of Calcutta"

This vessel requires per Table 22 -

90 -	<sup>ft</sup> 12	or	120 -	13
90 -	12		90 -	11
90	8		90 -	9

She has  
<sup>ft</sup> 120 -  $4\frac{1}{2}$  Stk = 13<sup>in</sup>  
 120 - 3 - = 9  
 90 - — = 9  
 360 - — = 7

The Towline is longer and larger than required, but the second Hauler though 120 ft. in length instead of 90<sup>ft</sup> is 9<sup>in</sup> instead of 12<sup>in</sup> - which can scarcely be considered equivalent.

In other respects the ship appears to be eligible to be cleared 100 P. 1 -

"Three seals"  
 "Two Iron chs"
