QUERY FORM.

London, 16th March 1891

The Surveyors, Middlesbro'

Report No. 363, on the s.s. "Alton Tower".

Official return gives dimensions as $313.5 \times 40.6 \times 20.2$, and horse-power as 235. Kindly say if these particulars are correct.

J.W.

Builders certificate gives horsepower as 230 and they say this is correct. Dimensions should be as given above, we having made the mistake of taking tenths for inches in copying particulars.
