

[illegible]

Geometric construction of a three-lobed star (triskelion) on a circular grid. The diagram shows a central circle with three intersecting circles of radius  $r = 2.315$ . The outer boundary is a 12-sided polygon. Dimensions include a top width of 280 and a central gap width of 135. Angles of  $120^\circ$  and  $30^\circ$  are marked. Labels I, II, and III indicate different construction stages or regions.

Technical drawing of a three-lobed gear-like shape (likely a propeller or fan blade) on a circular background. The drawing includes the following dimensions and construction details:

- Overall Width:** 280
- Inner Width:** 135
- Radius:** R=215
- Radius:** R=208
- Angles:** 120° (indicated at the top and bottom vertices of the central triangle)
- Construction:** The shape is defined by three circular arcs (lobes) meeting at the vertices of an equilateral triangle. The arcs are centered at the vertices of a larger equilateral triangle. The drawing shows the construction lines, including the arcs and the triangle, as well as the final profile of the shape.
- Labels:** I, II, III, IV, V, VI, VII, VIII, IX, X, XI, XII (likely indicating different views or sections of the object).

Sämtliche Masse sind Fertigmasse.
