

M.V. "TRITON".

Malmo Report No. 1587.  
-----

IT IS SUBMITTED the Malmo Surveyors be informed that the details of the pumping arrangements given in their report have been noted. It is concluded that whilst the arrangements of oil fuel and cargo oil pipes are similar to those on the M.V. "TITANIA", provision will also be made for:-

- (1) Blank flanges to the bilge suction to each section of the deep tank situated between frames 87/99.
- (2) Means for sounding, draining and ventilating the deep cofferdam between the port and starboard sections of the deep tank.

These conclusions should be confirmed.

The Surveyors should also state whether it is intended to carry water ballast in the new deep tanks.
