ELECTRICAL DEPARTMENT.

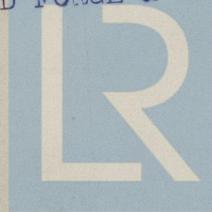

Messrs Lloyds Register of Shipping,
Belfast.

Dear Sirs, S.S. ESSEQUIBO

With regard to the question of area of the Dynamo Mains for the above vessel, to which our attention has been drawn by Mr. Beveridge. The output of the dynamos being 313 amperes, and the area of the Mains .4 sq inch, we would point out that in this case the dynamos are within a few feet of the Main Switchboard and the mains are of very short length. In addition to this the Generating plants is very much in excess of the requirements of the ship and it is hardly likely that the machines will ever be loaded up to exceed 30 K.W.

Yours faithfully,

P.Pro THE SUNDERLAND FORGE & ENGINEERING CO. LTD.
