FLEETWOOD

Electric Light Installation fitted by

W.J. YARWOOD & SONS LTD

Contract No. 490

When fitted 1935

Is the Vessel fitted for carrying Petroleum in bulk

No.

System of Distribution

Dental wire

Pressure of supply for Lighting

100

volts, Heating

volts, Power

volts.

Direct or Alternating Current, Lighting

Direct

Power

If alternating current system, state frequency of periods per second

✓

Has the Automatic Governor been tested and found efficient when the whole load is suddenly thrown on or off

Yes

Generators, do they comply with the requirements regarding temperature rise

are they compound wound No Shunt.

are they over compounded 5 per cent.

✓

if not compound wound state distance between each generator

✓

Where more than one generator is fitted are they arranged to run in parallel

✓

is an adjustable regulating resistance fitted in

series with each shunt field

Yes

Have certificates of test results for machines under 100 kw. been submitted and

approved Yes - here with

Have machines over 100 kw. been inspected by the Surveyors during manufacture and testing

✓

Are all terminals accessible, clearly marked, and furnished with sockets

Yes

are they so spaced or shielded that they cannot be accidentally earthed,

short circuited, or touched

Yes

Are the lubricating arrangements of the generators as per Rule

Yes

Position of Generators

Engin Room

Fore end.

in way of the generators satisfactory

Yes

are they clear of all inflammable material

Yes

if situated near unprotected

woodwork or other combustible material, state distance of same horizontally from or vertically above the generators

✓

and

are the generators protected from mechanical injury and damage from water, steam or oil

Yes

are their axes of rotation fore and aft No Aftwards ships

Earthing, are the bedplates and frames of the generating plant efficiently earthed

Yes

are the prime movers and their respective generators

in metallic contact

Yes

Main Switch Boards, where placed Engin Room Fore end.

If the generators and main switchboard are not placed in the same compartment, is each generator provided with a fuse on each insulated pole as near as possible to the terminals of the generator, additional to that provided on the main switchboard

✓

Switchboards, are they placed in accessible positions, free from inflammable gases and acid fumes

Yes

are they protected from mechanical

injury and damage from water, steam or oil

Yes

if situated near unprotected woodwork or other combustible material, state distance of same

horizontally from or vertically above the switchboards

✓

and

✓

are they constructed wholly of durable, non-ignitable non-absorbent

materials

Yes

is all insulation of high dielectric strength and of permanently high insulation resistance

Yes

is it of an approved type

Sindange

if semi-insulating material is used, are all conducting parts insulated from the slab with mica or micanite or other non-hygroscopic insulating material, and the slab similarly insulated from its framework

✓

is the non-hygroscopic insulating material of an approved

type

✓

and is the frame effectively earthed

Yes

Are the fittings as per Rule regarding:— spacing or shielding of live parts

accessibility of all parts

Yes

absence of fuses on back of board

Yes

temperature rise of

omnibus bars

Yes

individual fuses to voltmeter, pilot or earth lamp

Yes

are moving parts of switches alive in the

"off" position

No

are all screws and nuts securing connections effectively locked

Yes

are any fuses fitted on the live side of

switches

No

Main Switchgear, description of switchgear for each generator and each outgoing circuit, and arrangement of equalizer switches

D.P. Switch & fuses for dynamo & each outgoing circuit.

Are turbine driven generators fitted with emergency trip switch as per rule

✓

Are cupboards or compartments containing switchboards composed of

fire-resisting material or lined with approved material

Yes

Instruments on main switchboard

1

ammeters

voltmeters

✓

synchronising device for paralleling purposes.

✓

For compound machines is the ammeter connected on the opposite pole to equaliser connection

Earth Testing, state what means are provided at the main switchboard for indicating the state of the insulation of the system

Earth lamps connected to earth through switch of fuses

Switches, Circuit Breakers and Fusible Cut-outs,

do these comply with the requirements of the Rules

Dorman Smith

are the fusible cutouts of an approved type

current protection devices been tested under working conditions.

construction, protection, insulation, material, and position of these as per rule.

Cables: Single, twin, concentric, or multicore *Single & Twin* are the cables insulated and protected as per Tables IV, V, X or XI of the Rules.

If the cables are insulated otherwise than as per Rule, are they of an approved type.

any point of the installation under maximum load *4 volts*.

area of 0.04 square inch and above provided with soldering sockets.

If conductors are paper or varnished cambric insulated, is the dielectric at the exposed ends of the conductor protected from moisture by being suitably sealed with insulating compound, or waterproof insulating tape.

not exposed to drip or accumulation of water or oil, or to high temperature from boilers, steam pipes, uptakes or other hot objects, or to avoidable risk of mechanical damage.

Support and Protection of Cables, state how the cables are supported and protected *L.C. clipped up throughout.*

If cables are run in wood casings, are the casings and caps secured by screws, are the cap screws of brass, are the cables run in separate grooves.

Refrigerated Chambers, are the cables and fittings in accordance with the special requirements.

Joints in Cables, state if any, and how made, insulated, and protected *W.T. C.I. Joint Boxes with porcelain connectors.*

Watertight Glands and Deck Tubes, are all cables passing through decks and watertight bulkheads provided with deck tubes or watertight glands.

Bushes in Beams and Non-watertight Partitions, where unarmoured cables pass through beams and non-watertight partitions, are the holes efficiently bushed, state the material of which the bushes are made *Lead or chrome.*

Earthing Connections, state what earthing connections are fitted and their respective sectional areas.

, are their connections made as per Rule.

Alternative Lighting, are the groups of lights in the propelling machinery space arranged as per Rule, **Emergency Supply,** state position and method of control of the emergency supply and how the generator is driven.

Navigation Lamps, are these separately wired, controlled by separate switch and separate fuses, are the fuses double pole.

are the switches and fuses grouped in a position accessible only to the officers on watch.

has each navigation lamp an automatic indicator as per Rule.

Secondary Batteries, are they constructed and fitted as per Rule.

Fittings, are all fittings on weather decks, in stokeholds and engine rooms and wherever exposed to drip or condensed moisture, watertight, are any fittings placed in spaces in which goods are liable to be stacked in close proximity to them; if so, how are they protected.

are any fittings placed in spaces where inflammable or explosive dust or gases are liable to be present, if so, how are they protected.

, how are the cables led

where are the controlling switches situated.

are all fittings suitably ventilated, are all switches and lampholders constructed wholly of non-ignitable, non-absorbent materials.

Heating and Cooking Appliances, are they constructed and fitted as per Rule, are air heaters constructed and fitted as per Rule.

Searchlight Lamps, No. of, whether fixed or portable, are their fittings as per Rule.

Arc Lamps, other than searchlight lamps, No. of, are their live parts insulated from the frame or case, are their fittings as per Rule.

Motors, are their working parts readily accessible, are the coils self-contained and readily removable for replacement.

are the brushes, brush holders, terminals and lubricating arrangements as per Rule, are the motors placed in well-ventilated compartments in which inflammable gases cannot accumulate and clear of all inflammable material.

are they protected from mechanical injury and damage from water, steam or oil, are their axes of rotation fore and aft, if situated near unprotected woodwork or other combustible material, are the motors of the totally enclosed, pipe ventilated, forced draught, drip or flame proof type.

, if not of this type, state distance of the combustible material horizontally or vertically above the motors, and.

have machines of over 100 BHP been inspected by the Surveyors during manufacture and testing, **Control Gear and Resistances,** are the generator field and motor speed regulators, starters and controllers constructed and fitted as per Rule.

are required, are these fitted as per Rule, **Ships carrying Oil having a Flash Point less than 150° F.** Have the special requirements of the Rules been complied with regarding switches, joint boxes, section and distribution boards, protection of cables, method of distribution, lead of cables, lights and fittings.

are all fuses of the filled cartridge type, are they of an approved type.

If portable lamps for use in dangerous spaces are supplied, are they of a self-contained, battery-fed type approved by the Home Office.

Spare Gear, if the vessel is for open sea service have spares been supplied as per Rule.

Joint Boxes, Section and Distribution Boards, is the

Fall of Pressure, state maximum between bus bars and

Cable Sockets, are the ends of all cables having a sectional

Paper Insulated and Varnished Cambric Insulated Cables,

Cable Runs, are the cables fixed as far as possible in accessible positions

Lloyd's Register Foundation

All Conductors are of annealed copper conforming to British Standard Specification No. 7 (or International Electro-technical Commission Publication No. 28).

The Insulated Conductors are guaranteed to withstand the immersion and resistance tests specified in the Rules.

The foregoing is a correct description.

For W. J. YARWOOD & SONS, LTD,

Albert Yarwood DIRECTOR,

Electrical Engineers.

Date *Sept 17/35.*

COMPASSES.

Distance between electric generators or motors and standard compass *9 ft approx*

Distance between electric generators or motors and steering compass *✓*

The nearest cables to the compasses are as follows:—

A cable carrying *2.50* Ampères *5* feet from standard compass. — feet from steering compass.

A cable carrying *4* Ampères *in* feet from standard compass. — feet from steering compass.

A cable carrying — Ampères — feet from standard compass. — feet from steering compass.

Have the compasses been adjusted with and without the electric installation at work at full power *Yes.*

Has the effect of switching on and off circuits, motors and other electro-magnetic apparatus within the vicinity of the compasses been noted *Yes.*

The maximum deviation due to electric currents was found to be *nil* degrees on *any* course in the case of the standard compass, and *✓* degrees on *✓* course in the case of the steering compass.

For W. J. YARWOOD & SONS, LTD.

Albert Yarwood DIRECTOR.

Builder's Signature.

Date *Sept 17/35.*

Is this installation a duplicate of a previous case *No.* If so, state name of vessel *✓*

General Remarks (State quality of workmanship, opinions as to class, &c. *This installation has been fitted*)

on board under special survey & in accordance with the approved plans and the modifications approved in London letter of 10th Sept 1935. The installation has been tested under full working conditions and found satisfactory. The materials & workmanship have been found to be good & sound.
