frames, skin planking, or ceiling are of unusual thickness the breadth of vessel to inside  
ceiling should be reported if possible.  
vessels obtaining an allowance for deck erections under Para. 11 where the sheer drops abaft amid-  
ships the height of the R. Q. D. is to be taken from the level of the top of the amidship beam.  
sh-decked vessels the total standard mean sheer means the sheer measured at the stem and stern-  
st. In vessels having poops and forecastles, it means the sheer measured at points distant  
eighth of the vessel's length from stem and stern-post.

† State dimensions of freeing port area on back of this form.

‡ The Surveyor should state whether the fall in sheer as reported is measured relatively to the straight  
line of keel or to the water line. If measured relatively to water line the vessel's draft at time of  
survey, and also the usual load draft forward and aft should be reported.
