

REPORT on the S.S. "Talemore".

It is submitted the Surveyor be informed that it is concluded the ~~from the stowage between decks~~ leading to the bilges have been removed and the holes in the deck closed with riveted plates but he should confirm this.

It is presumed that the bulkheads at the ends of the tonnage opening are originally built in the ship viz:- on frames 15 & 17, the after end being 31'-7" from the after perpendicular but the surveyor should confirm this.

The Surveyor should state the new tonnages of the ship as ascertained by the Board of Trade, if these are available.
