

T.S.S "GARDENGA".

Vessel 129.5 ft x 27.8 ft x 8.35 ft.

Proposed Classification:- 100A- "For Coasting Service between
Lourenco Marques & Port Elizabeth"

Details of the engines and boilers were dealt with in the
endorsement dated 24th April last.

The Bremen Surveyors have now submitted a plan of the
general pumping arrangement.

IT IS SUBMITTED that the plan of general pumping
arrangement merits approval, provided either the independent
bilge pump or the bilge ejector be fitted with a direct suction
to the engine room bilges; the donkey pump discharge connection
to the suction line be dispensed with and separate arrangements
be made for filling the fore peak trimming tank and the
after peak feed water tank, and the arrangements be otherwise as
shewn and amended on the plan.

It is concluded that bilge pumps worked from the
main engines are fitted and that a bilge injection is fitted to
the circulating water pumps, but these conclusions should be
confirmed.

Return 2 plans.

Retain copy.
